

SWGI Operator – Certification & Submission Guide

1. Repository & Submission Path

Use the official Red Hat Ecosystem Operators repository:

Link: <https://github.com/redhat-openshift-ecosystem/certified-operators>

Action: - Fork the repository - Submit your Operator Bundle via Pull Request (PR) to the main branch

Sign-off Requirement: - All commits must include:

Signed-off-by: Your Name <company email>

- This verifies corporate ownership and identity for Red Hat and government validation

2. OperatorHub.io vs OpenShift Console

Once the PR is merged:

- Operator appears on **OperatorHub.io**
- Automatically becomes available in the **OpenShift Console (OperatorHub UI)**

Result: - Admins can discover and install SWGI Operator directly - Enables "one-click" deployment inside OpenShift clusters

3. Disconnected / Air-Gapped Support (REQUIRED)

Target environments include restricted / Navy / DoD networks.

Requirements: - All images must support **disconnected installs** - Compatible with: - `oc mirror` - private registries

Do NOT: - Hardcode external URLs - Require public internet access - Use "phone-home" dependencies

Goal: - Fully self-contained deployment - Works in DDIL / air-gapped environments

4. Registry & Security Scanning

Image Hosting: - Use Red Hat-aligned registry (recommended: Quay.io)

Security Requirement: - Run Red Hat **Pre-Certification Scan** - Must have: - ZERO Critical vulnerabilities - ZERO High vulnerabilities (target standard)

Reason: - Required for Cyber / government-grade deployment - Maintains marketplace trust and security rating

5. Capability Level (OLM Requirements)

Target: **Capability Level 2+**

Must demonstrate: - Seamless upgrades via OLM - Versioned releases - Backward compatibility where applicable

Key Requirement: - Proper CSV upgrade paths defined - No manual intervention during upgrades

6. Metadata & Branding (CSV File)

The ClusterServiceVersion (CSV) must include:

- Company Name
- Product Name (SWG I Operator)
- Description (clear + concise)
- Logo (base64 encoded)
- Support Contact Email

Purpose: - This is your identity inside OpenShift - Visible to all users in OperatorHub

7. Submission Checklist

Before submitting PR:

- ☐ Operator Bundle complete (manifests + metadata)
- ☐ CSV properly configured
- ☐ Images hosted in approved registry
- ☐ No external dependencies
- ☐ Disconnected install verified
- ☐ Pre-cert scan passed
- ☐ Upgrade path defined

- [] Commit signed-off
-

Summary

This process ensures SWGI becomes:

- Discoverable in OperatorHub
 - Installable in OpenShift environments
 - Compliant with enterprise and DoD requirements
 - Ready for scaled deployment across restricted networks
-
